pot holder/chimney

air control + handle

furnace

matches

fuel

kindling

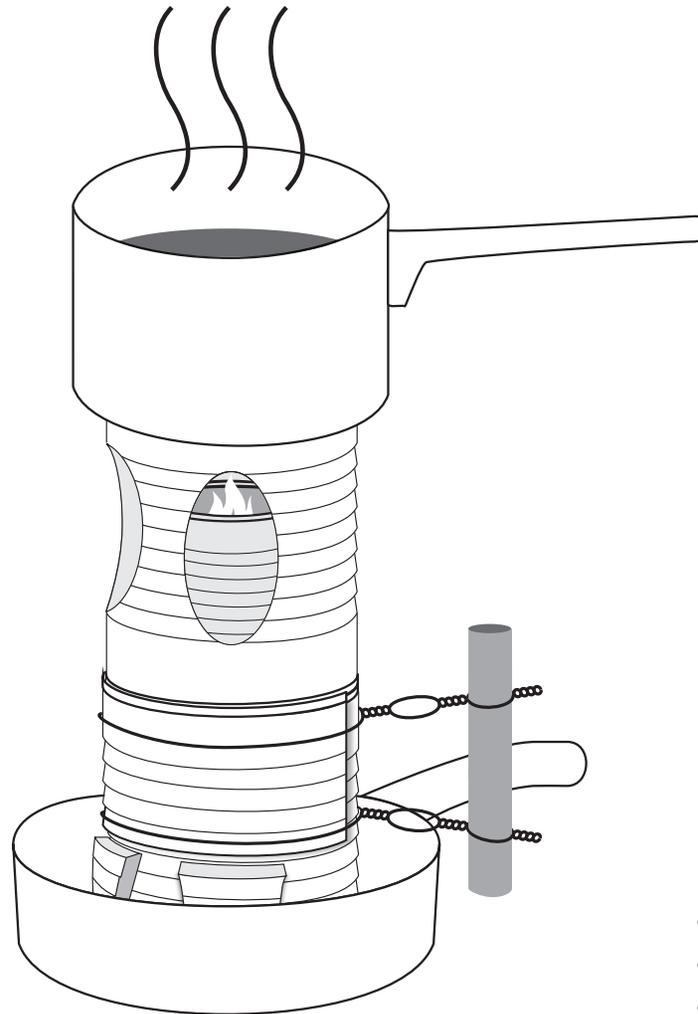

tinder

fuel spacer

pot or tin with airtight lid

THE COOKSTOVE

Good for planet, plants and soil.

- Makes Biochar
- Burns approximately 20 minutes
- 10 minutes to boil 1 litre of water
- Fuel capacity 300 grams
- 300 burns when stored in dry location
- Stove build can take 2 to 6 hours

READ ALL INSTRUCTIONS BEFORE BEGINNING

Important: Refer to these instructions during construction, assembly and use.

SAFETY

- For outdoor use only
- Snip all sharp points before assembling
- Keep children, pets, and livestock away when in use
- Have breeze behind you and handle of stove facing you
- Use stove on a fireproof surface
- After lighting there should be no visible smoke—never breath visible smoke
- Avoid breathing exhaust even if no smoke is visible
- Wait until the flame has receded into the stove before removing stove from base
- Use pliers to remove furnace
- Do not remove the biochar or the fuel spacer until base has cooled
- Store stove safely inside
